

## Assignment 9 (correction wrt revised notes)

$$\textcircled{1}. B = \{v_1 = (1, 1, 0), v_2 = (0, 0, 1), v_3 = (1, 0, 4)\}$$

$$S = \{e_1 = (1, 0, 0), e_2 = (0, 1, 0), e_3 = (0, 0, 1)\}$$

the change of basis matrix relative to

$[S \ B]$  is given by

$$(C_{[S, B]})^T = \begin{pmatrix} 1 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 4 \end{pmatrix}^T = \begin{pmatrix} 1 & 0 & 1 \\ 1 & 0 & 0 \\ 0 & 1 & 4 \end{pmatrix} = C_{[S, B]}$$

and

$$C_{[BS]} = \begin{pmatrix} 0 & 1 & 0 \\ -4 & 4 & 1 \\ 1 & -1 & 0 \end{pmatrix}$$

(refer to the revised notes for the description of  $C_{[BS]}$ . As in literature, we shall refer to  $C_{[BS]}$  as the change of basis matrix relative to  $[BS]$ .)

## Assignment 9

①

1. To show the set

$$B = \{v_1 = (1, 1, 0), v_2 = (0, 0, 1), v_3 = (1, 0, 4)\}$$

form a basis of  $\mathbb{R}^3$ .

$\therefore \dim_{\mathbb{R}} \mathbb{R}^3 = 3$ , it suffices to show  $X$  is linearly independent.

To check  $X$  is linearly ind, we show that

$$c_1(1, 1, 0) + c_2(0, 0, 1) + c_3(1, 0, 4) = (0, 0, 0)$$

implies  $c_1 = c_2 = c_3 = 0$ .

Consider  $c_1 v_1 + c_2 v_2 + c_3 v_3 = 0$ .

$$\Rightarrow c_1 + c_3 = 0$$

$$c_1 = 0$$

$$c_2 + 4c_3 = 0$$

$$\Rightarrow c_3 = -c_1 = 0, \quad c_2 = -4c_3$$

$$\text{This shows } c_1 = c_2 = c_3 = 0.$$

i.e.  $X$  is lin. ind.

Let  $(1, 0, 0) = a_1 v_1 + a_2 v_2 + a_3 v_3$   
 $(1, 0, 0) = a_1(1, 1, 0) + a_2(0, 0, 1) + a_3(1, 0, 4)$   
 $\Rightarrow 1 = a_1 + a_3, \quad 0 = a_1, \quad a_2 + 4a_3 = 0$   
 $\Rightarrow a_3 = 1, \quad a_2 = -4$   
 $\therefore (1, 0, 0) = 0 \cdot v_1 - 4v_2 + v_3$ .

$$\Rightarrow [(1, 0, 0)]_{\mathcal{B}} = \begin{pmatrix} 0 \\ -4 \\ 1 \end{pmatrix} \quad (2)$$

$$\begin{aligned} (0, 1, 0) &= b_1 v_1 + b_2 v_2 + b_3 v_3 \\ &= b_1 (1, 1, 0) + b_2 (0, 0, 1) + b_3 (1, 0, 4) \end{aligned}$$

$$\Rightarrow 0 = b_1 + b_3, \quad 1 = b_1, \quad 0 = b_2 + 4b_3$$

$$\Rightarrow b_3 = -1, \quad b_2 = -4(-1) = 4.$$

$$\therefore [(0, 1, 0)]_{\mathcal{B}} = \begin{pmatrix} 1 \\ 4 \\ -1 \end{pmatrix}.$$

$$\begin{aligned} (0, 0, 1) &= c_1 v_1 + c_2 v_2 + c_3 v_3 \\ &= c_1 (1, 1, 0) + c_2 (0, 0, 1) + c_3 (1, 0, 4) \end{aligned}$$

$$\Rightarrow 0 = c_1 + c_3, \quad 0 = c_1, \quad 1 = c_2 + 4c_3$$

$$\Rightarrow c_3 = 0, \quad c_2 = 1.$$

$$\Rightarrow [(0, 0, 1)]_{\mathcal{B}} = \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}$$

$$[v_1]_{\mathcal{S}} = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix}, \quad [v_2]_{\mathcal{S}} = \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix}, \quad [v_3]_{\mathcal{S}} = \begin{pmatrix} 1 \\ 0 \\ 4 \end{pmatrix}$$

~~\therefore [B]\_{\mathcal{S}}~~

change of basis matrix relative to  $[\mathcal{S}, \mathcal{B}]$

$$= \begin{pmatrix} 0 & -4 & 1 \\ 1 & 4 & -1 \\ 0 & 1 & 0 \end{pmatrix}$$

change of basis matrix relative to  $[\mathcal{B}, \mathcal{S}]$

$$\begin{pmatrix} 1 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 4 \end{pmatrix}.$$

$$2. V = M_2(\mathbb{R})|_{\mathbb{R}}$$

(3)

any general element of  $M_2(\mathbb{R})$  is of the form  $\begin{pmatrix} a & b \\ c & d \end{pmatrix} = a \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix} + b \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} + c \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} + d \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}$

This shows,

any element in  $V$  lies in the span of

$$X = \left\{ \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix}, \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}, \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}, \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix} \right\}$$

we now show that  $X$  is linearly ind.

So we consider

$$c_1 \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix} + c_2 \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} + c_3 \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} + c_4 \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix} = \begin{pmatrix} 0 & 0 \\ 0 & 0 \end{pmatrix}$$

$$\Rightarrow \begin{pmatrix} c_1 & c_2 \\ c_3 & c_4 \end{pmatrix} = \begin{pmatrix} 0 & 0 \\ 0 & 0 \end{pmatrix}$$

then equating the components we see that

$$c_1 = 0 = c_2 = c_3 = c_4$$

$\Rightarrow X$  is lin. ind, Hence  $X$  is a basis of  $V|_{\mathbb{R}}$ .

$$3. V = \left\{ A \in M_2(\mathbb{R}) \mid a_{11} + a_{22} = 0 \right\}$$

$$\Rightarrow A \in V \text{ if } A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix} \text{ with } a_{11} + a_{22} = 0 \text{ or } a_{11} = -a_{22}$$

This shows that any elt in  $V$  is of the form,

$$\begin{pmatrix} a_{11} & a_{12} \\ a_{21} & -a_{11} \end{pmatrix} = a_{11} \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} + a_{12} \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} + a_{21} \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}$$

which implies that  $B = \left\{ \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}, \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}, \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} \right\}$  spans  $V$ .

Now consider,

(4)

$$c_1 \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} + c_2 \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} + c_3 \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} = \begin{pmatrix} 0 & 0 \\ 0 & 0 \end{pmatrix}$$

$$\Rightarrow \begin{pmatrix} c_1 & c_2 \\ c_3 & -c_1 \end{pmatrix} = \begin{pmatrix} 0 & 0 \\ 0 & 0 \end{pmatrix}$$

equating the components we see that

$$c_1 = c_2 = c_3 = 0.$$

$\Rightarrow$  This shows that  $B$  is a basis of  $V|_{\mathbb{R}}$ .
